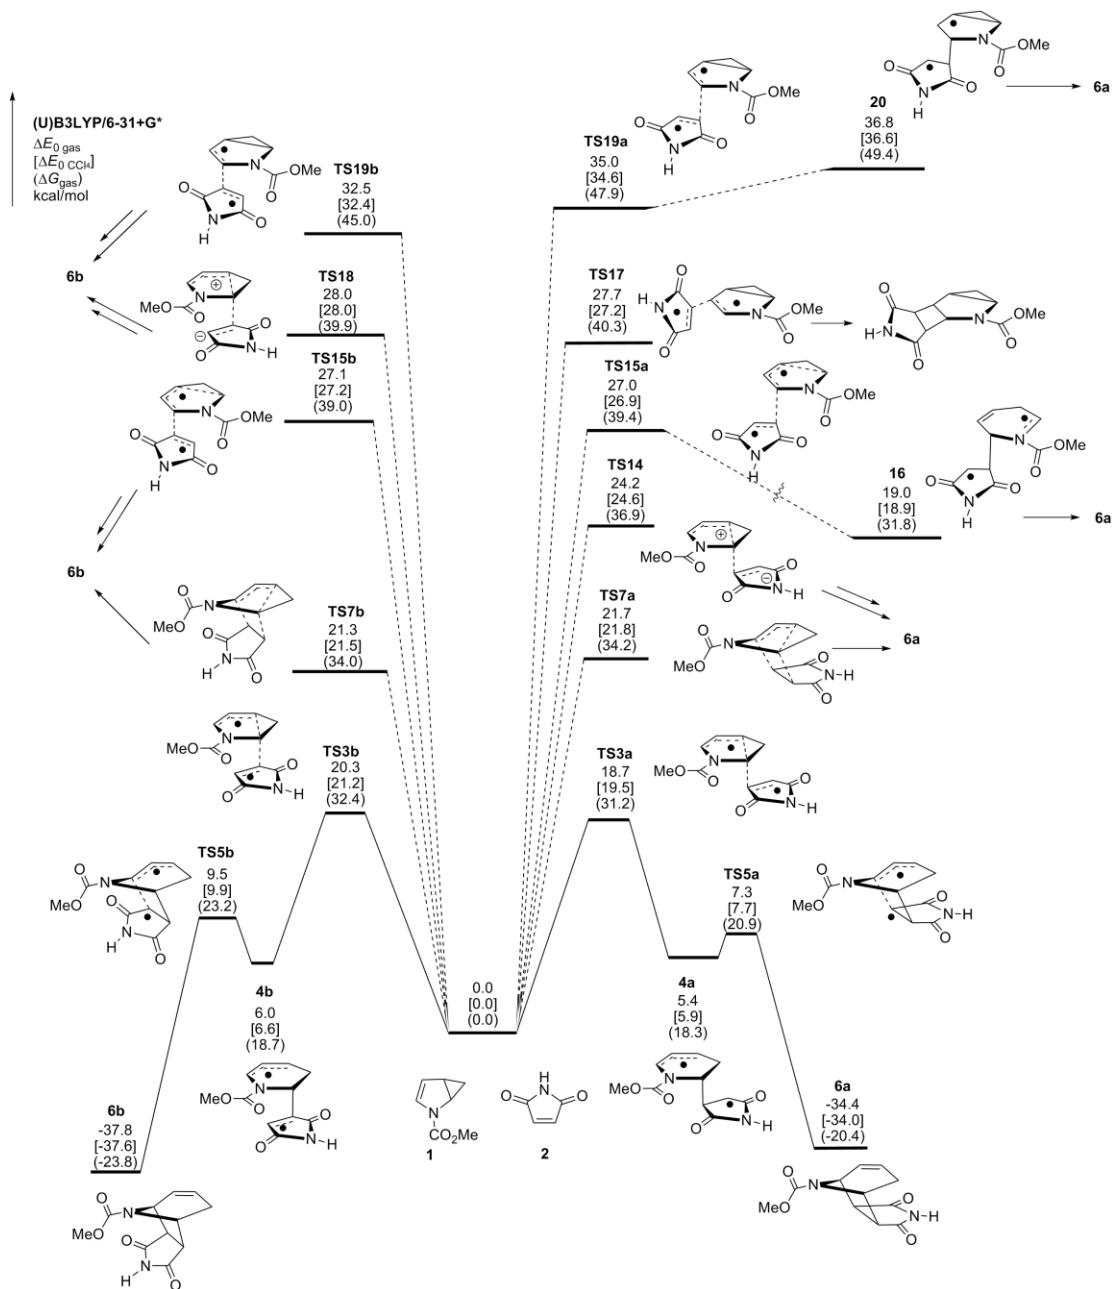

Figure S1.The computed energy surfaces for pathways *a-d* between **1** and **2** at the (U)B3LYP/6-31+G* level

Note: Every species in this Figure could have two conformers because the amide group can have two different conformations. Every species listed here is the one with the lower energy compared to another conformer. It is interesting to note that the energy difference between each pair of conformers is very small (for example, **TS3a** here is lower than its another conformer by about 0.5 kcal/mol).

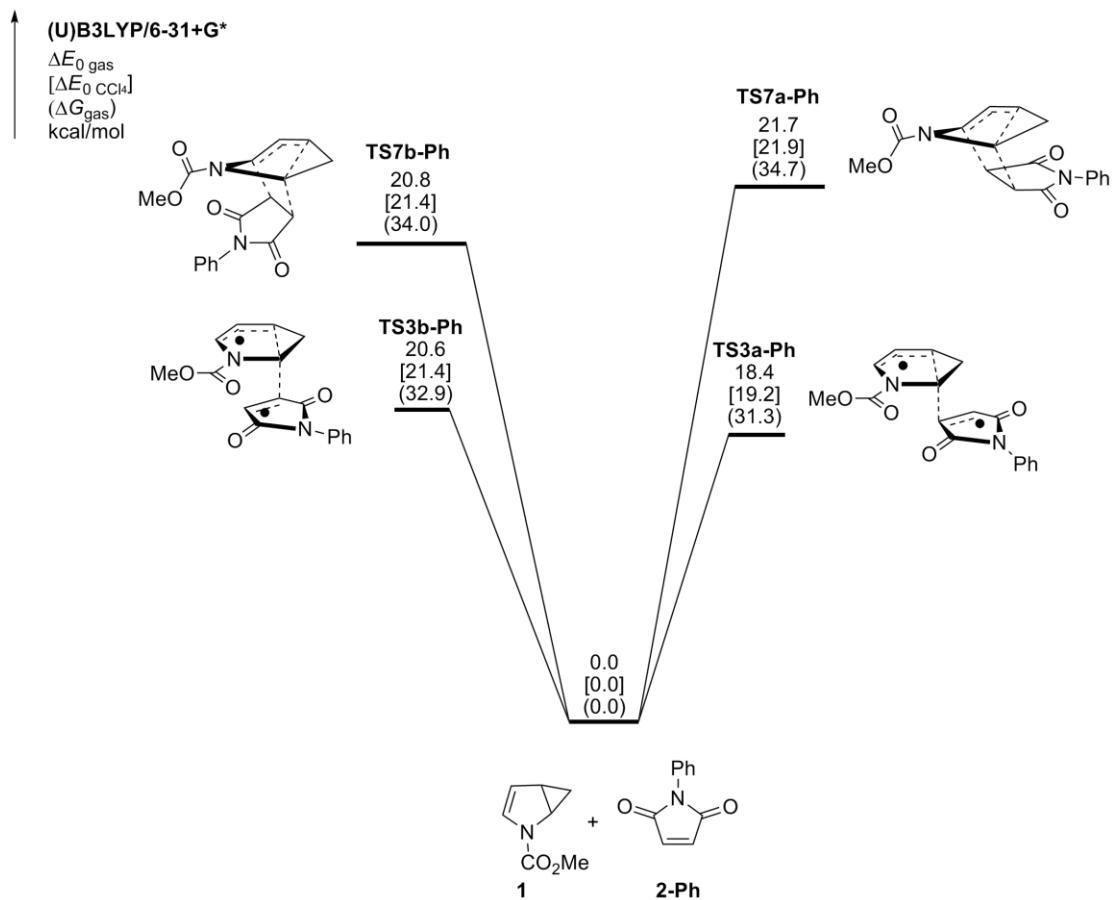

Figure S2. The computed energy surfaces for pathways *a* and *c* between **1** and **2-ph** at the (U)B3LYP/6-31+G* level

Note: Every species in this Figure could have two conformers because the amide group can have two different conformations. Every species listed here is the one with the lower energy compared to another conformer. It is interesting to note that the energy difference between each pair of conformers is very small (for example, **TS3a-Ph** here is lower than its another conformer by about 0.3 kcal/mol).

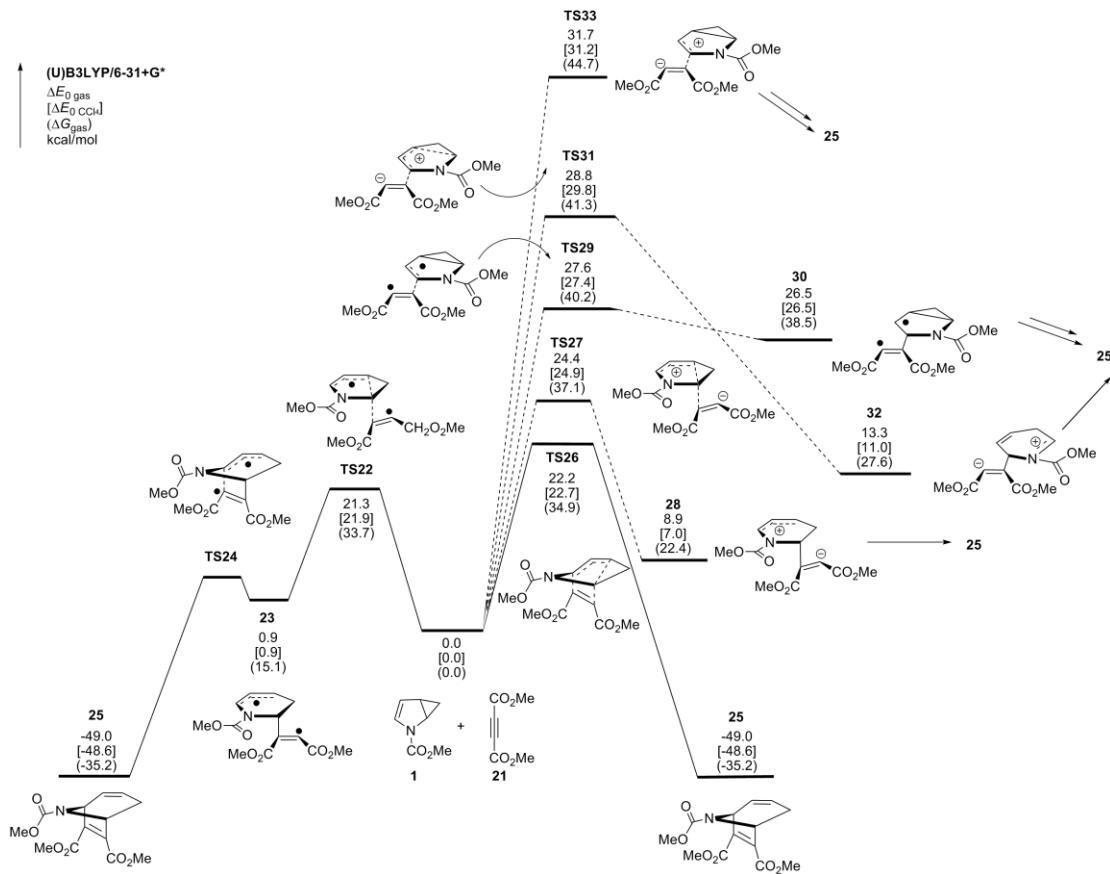

Figure S3. The computed energy surfaces for pathways *a-d* between **1** and **21** at the (U)B3LYP/6-31+G* level

Note: Here we only consider the conformation changes through the amide bond rotations in **TS22** and **TS26** because these are rate-determining transition states in two competing pathways.

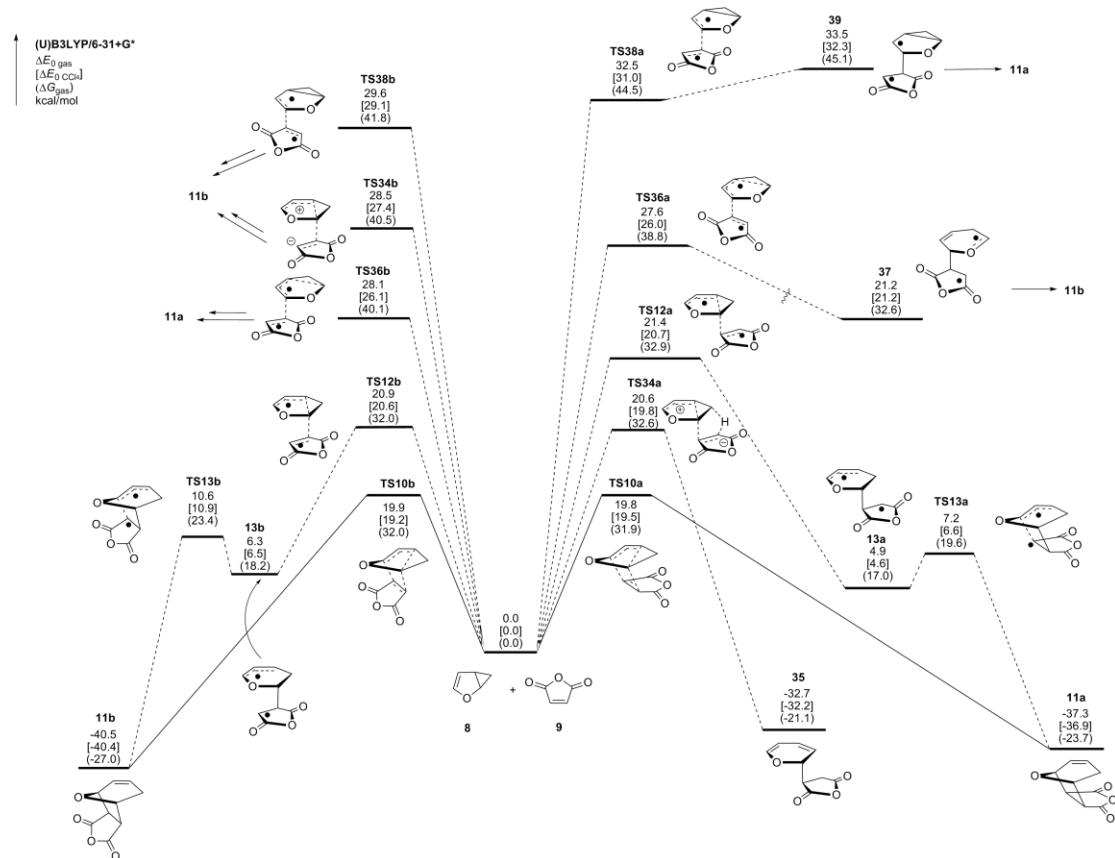

Figure S4. The computed energy surfaces for pathways *a-d* between **8** and **9** at the (U)B3LYP/6-31+G* level

Note: The zwitterionic pathway *c* via **TS34b** is not favored than the diradical pathway *c*. It was found that **TS34a** led to an ene-type reaction to give **35** (this pathway is not favored by about 0.3 kcal/mol in solution than pathway *a*). Experimentally no such product was reported. The reason for this is not known. All efforts to locate a zwitterionic transition state in pathway *c* to get endo **11a** always led to location of **TS34a** corresponding to the ene-like reaction.

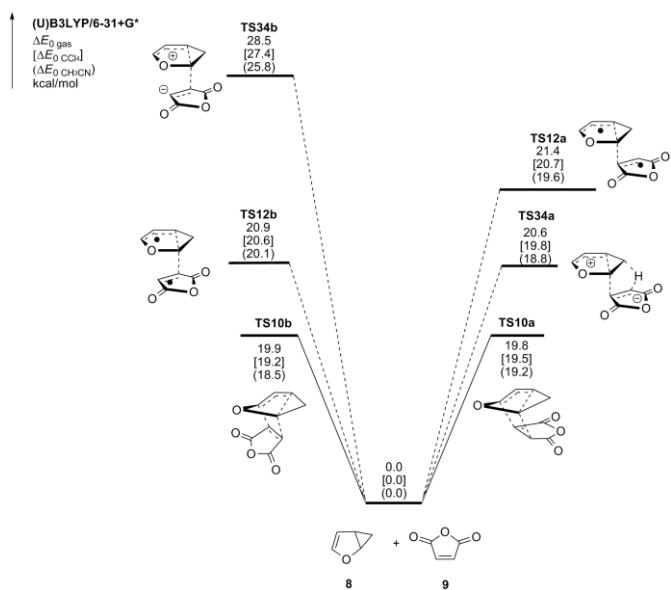

Figure S5. Comparison of ΔE_0 in different solvents for pathways *a* and *c* between **8** and **9** at the (U)B3LYP/6-31+G* level

Table S1. Sum of electronic and zero-point energies (E_0 , in Hartree), sum of electronic and thermal enthalpies (H , in Hartree), sum of electronic and thermal free energies (G , in Hartree), total free energy in CCl_4 ($SP_{\text{ccl}4}$, in Hartree), zero-point energy (ZPE , in Hartree) and thermo corrected zero-point energies in CCl_4 ($E_{0-\text{ccl}4}$).
